Audit #42

Scenario: healthcare

Model: claude-sonnet-4-5-20250929

Latency: 25,424ms

VERIFIED ARTICLE

Q: Is the flu shot safe for my child?

A: Yes, the flu shot is safe for children ages 5 to 12. It has been used for many years and is carefully tested before being given to kids. Millions of children get the flu shot every year. The vaccine helps protect your child from getting very sick with the flu. Serious side effects are very rare. If you have questions about your child's health history, talk to your doctor or nurse before getting the vaccine.

Q: When should my child get the flu shot for the school year?

A: The best time is early fall, ideally by the end of October. This gives your child's body time to build protection before flu season gets busy, which usually happens in winter. If you miss that window, it's still helpful to get the shot later. Flu season can last into spring, so getting vaccinated in November, December, or even later still offers protection. It takes about two weeks after the shot for your child's body to build full immunity.

Q: What side effects might my child have after the flu shot?

A: Most children have no side effects or only mild ones. Your child might have a sore arm where they got the shot, and it may be a little red or swollen. Some kids feel tired, have a mild headache, or get a low fever for a day or two. These are normal signs that the body is building protection. The flu shot cannot give your child the flu because it does not contain live virus. If side effects happen, they usually go away on their own within a couple of days.

Unsources — editor review recommended (top similarity 0.28)

Q: Where can I take my child to get a flu shot?

A: You have several options. Your child's doctor's office or pediatrician is a great place to start. Many pharmacies also give flu shots to children, though some have age limits, so call ahead to check. Local health departments often offer low-cost or free flu clinics, especially before the school year starts. Some schools host vaccine clinics where kids can get their flu shots at school. Check with your child's school or your insurance company to find convenient locations near you.

Q: What if my child is sick on the day of their flu shot appointment?

A: If your child has a mild cold or runny nose but no fever, they can usually still get the flu shot. But if your child has a fever or is feeling really sick, it's better to wait until they feel better. Call your

doctor's office or the clinic to ask if you should reschedule. Once your child is feeling well again, you can get the flu shot. Waiting a few days won't cause a problem, and it helps make sure your child's immune system can respond well to the vaccine.
